

# Hacker News API Viewer

Sample Application for iOS  
Boilerplate

# Summary

- Access JSON API of Hacker News and show Top Stories and New Stories.

# Features

# Notes

- Use The following APIs
  - <https://hacker-news.firebaseio.com/v0/topstories.json>
  - <https://hacker-news.firebaseio.com/v0/newstories.json>
  - <https://hacker-news.firebaseio.com/v0/item/{id}.json>
- TopStories / NewStories APIs only returns IDs and you need to get detail data from item APIs. It takes huge cost and caching strategy is important.

# Requirements

- Use iOS Boilerplate
  - <https://github.com/Innovatube/ios-boilerplate>
- Use RxSwift
- Use Realm(<https://realm.io/> ) For Data Storing
- Need to consider your best UI/UX by yourself.
- This is simple app but it's for training. You need to make the code clean as much as possible for readability, maintainability, and extendability.
- Push to GitHub Public Repository frequently during development for review.
